

EAS Simulator

Version 2.2

Released April 2019

1 Introduction

EAS Simulator 2.2 is a java program that is capable of sending EAS alerts to the intended server according to the SCTE-18 standard defined in Emergency Alert Messaging for Cable^[1].

2 Program Input

The program reads the input from a properties file (i.e. config.properties) as follows:

```
alertID = 10227
srcIP = 172.16.3.101
srcPort = 32769
srcMacAddress = 00:13:3b:10:31:5b
dstIP = 239.8.8.70
dstPort = 10000
multicastTtl = 20
alertMessageDuplicateCount = 2
additionalStartDelay = 0
alertMessageTimeRemaining = 30
eventStartTime = 0
alertPriority = 15
eventDuration = 15
isInBandEnabled = true
detailsMajorChannelNumber = 0
detailsMinorChannelNumber = 0
detailsAudioOobId = 0
detailsVideoOobId = 0
exceptionChannelList = enabled
inBandExceptionList = 116-2 115-1 79-1 116-2
oobExceptionList = 2012 2059 2076 2079 5022 5023
easAlertCode = RWT
locations = 004021 004013 006003 000000 006000 006007 002000 002068 010000 025000
012000 008000
outOfBandPID = disabled
```

3 Field Description

alertID

Specifies the Event ID

Value: Numeric

srcIP

Specifies the source IP.

Value: valid IP address, which is configured in a Network Interface of the host machine.

srcPort

Specifies the Source port
Value: a valid port
Range: 0-65535

`srcMacAddress`

Specifies the source MAC address
Value: MAC address of the host machine

`dstIP`

Specifies the destination Multicast IP
Value: valid Multicast IPv4 Address

`dstPort`

Specifies the Destination port
Value: a valid port between 0-65535

`multicastTtl`

Multicast Time to live
Value: numeric

`alertMessageDuplicateCount`

Specifies the number of times the packet should be repeated for a reliable transfer
Value: numeric

`additionalStartDelay`

Specifies the time to delay before starting an event. But in our system, this field is ignored.
Value: numeric

`alertMessageTimeRemaining`

Specifies the alert duration (AMTR) in seconds
Value: 0-255

`eventStartTime`

This field is ignored in our system.
Value: numeric

`alertPriority`

Specefies the alert Priority
Value: 0, 3, 7, 11, 15

`eventDuration`

This field is ignored in our system.
Value: numeric

`isInBandEnabled`

Specifies if the Alert is Inband or Out of Band. Inband if set to true, Out of Band if flase. With a value "true" it will send the values specified in detailsMajorChannelNumber and detailsMinorChannelNumber, but for flase, it will send values specified for detailsAudioOobId and detailsVideoOobId

Value: true or false

detailsMajorChannelNumber

Specifies the details major channel number

Value: 0-255

detailsMinorChannelNumber

Specifies the minor channel number

Value: 0-255

detailsAudioOobId

Specifies Deatails Source ID, Audio channel

Value: 0-65535

detailsVideoOobId

Specifies Deatails Source ID, Audio channel

Value: 0-65535

exceptionChannelList

If enebaled, either Inband or Out of Band exception list will be sent, depending on isInBandEnabled field.

Value: enabled, disabled

inBandExceptionList

Exception list for Inband

Value: <major channel Number>-<minor channel number> seperated by a space, 0-255 for both major and minor

oobExceptionList

Exception list for 00B.

Value: numeric, 0-65535 seperated by a space

easAlertCode

EAS Alert code

Value: any valid alert code listed in the simulator

locations

Specifies the FIPS codes.

Value: One or more locations listed in the simulator.

outOfBandPID

Specifiec the PID, 0x1FFC if enabled, 0x1FFB if disabled

Value: enabled, disabled

4 How to run

```
$ java -jar EasSimulatorCli-vX.X.jar [options] [args]
```

Where options include:

```
-f: read config file [usage: -f [fileName]]
-s: print Eas Payload Summary upon sending
-x: turn off all packet information on console
-p: decode SCTE18 pcap/pcapng
    [usage: -p [filename]]
```

```

-l:    list all available locations
-c:    list all available SCTE18 Alert Codes
-g:    write sample config file
--help: shows help
-v:    version
-a:    about

```

5 Sample EAS Alert

config.properties:

```

alertID = 10206
srcIP = 172.16.3.101
srcPort = 32769
srcMacAddress = 00:13:3b:10:31:5b
dstIP = 239.8.8.70
dstPort = 10000
multicastTtl = 20
alertMessageDuplicateCount = 4
additionalStartDelay = 0
alertMessageTimeRemaining = 60
eventStartTime = 600
alertPriority = 15
eventDuration = 15
isInBandEnabled = true
detailsMajorChannelNumber = 0
detailsMinorChannelNumber = 0
detailsAudioOobId = 0
detailsVideoOobId = 0
exceptionChannelList = enabled
inBandExceptionList = 116-2 115-1 79-1
oobExceptionList = 2012 2059 2076 2079 5022 5023 5024 5042 5063 7744 7754 7759

Cable Emergency Alert sent on: Wed Apr 17 15:02:18 CST 2019 with Eas event ID:
10206

We can turn off details log by using -x option as follows:

```
$ java -jar EasSimulatorCli-2.2.jar -f config.properties -x
```

Cable Emergency Alert sent on: Wed Apr 17 15:02:18 CST 2019 with Eas event ID:
10206

6 Decode a pcap EAS packet

This simulator can also decode SCTE-18 packets captured in Wireshark.

```
$ java -jar EasSimulatorCli-2.2.jar -p eas_inband_021018.pcap
```

9 System Requirements

openjdk version "1.8.0_191"

10 Network Permission

The program requires packet capture permission if running on a linux machine:

Give permission:

```
setcap cap_net_raw,cap_net_admin=eip /usr/lib/jvm/java-8-openjdk-amd64/jre/bin/java
```

Check the permission:

```
getcap /usr/lib/jvm/java-8-openjdk-amd64/jre/bin/java
```

Note: Make sure to provide the correct jdk path
